### **Roseburg Community Cancer Center Unveils Breakthrough Technology**

Roseburg, USA — April 15, 2015 — The Community Cancer Center is opening its doors to the public in celebration of the successful installation and certification of the most advanced radiotherapy treatment technology available in the healthcare industry.

The TrueBeam system, from Varian Medical Systems, was engineered from the ground up to deliver more powerful cancer treatments with pinpoint accuracy and precision. It uniquely integrates new imaging and motion management technologies within a sophisticated new architecture that makes it possible to deliver treatments more quickly while monitoring and compensating for tumor motion, opening the door to new possibilities for the treatment of lung, breast, prostate, head and neck, as well as other cancers that are treatable with radiotherapy

“Our new technology makes it possible to deliver accurate image-guided treatments within a few minutes per day. At the same time, we can monitor and compensate for tumor motion, and that further increases treatment accuracy,” said Radiation Oncologist Randy Moore, DO.

“We are very proud of having this amazing technology in Roseburg. It is truly a testament to our board’s commitment to provide the best cancer treatment available anywhere,” said Executive Director Tammy Hagedorn.

The Community Cancer Center (CCC) is a private, charitable, non-profit, community-owned and operated cancer treatment facility.

Early access for Press at 4:30pm.
